Stop Smoking Medication

Patient Guidance

15mg Nicotine Patch 16 Hour

Your Stop Smoking Medication

15mg Nicotine Patch – 16 hour

This patch is designed to give a medium dose of nicotine steadily throughout the day for about 16 hours.

1. Put the patch on as soon as you wake up – you will need scissors to open the packet.
2. Peel off one part of the backing foil and put the patch on a clean, hairless, dry area of skin that is not red, cut or irritated, on the front or side of the chest, upper arm or hip.
3. Once in place remove the remaining half of the backing foil and hold your hand over the patch firmly for a few seconds to ensure it sticks to the skin.
4. Once you have put it on, the patch will take about half an hour to reach its full effect.
5. Leave it on all day. It may tingle or itch to start with, but this should stop after 15 – 20 minutes.
6. Take the patch off before you go to bed. Once removed fold the patch in half and throw it away in your household rubbish out of reach of any children or pets.
7. On waking put the new patch on in a different place. This gives the skin a chance to recover as there may be some redness. Try to have four different places that you use for the patch.
8. Keep using the patches for 6-8 weeks, or as instructed by your stop smoking advisor.

This guidance is applicable for all brands of this product.
