Stop Smoking Medication

Patient Guidance

21mg Nicotine Patch 24 Hour

Your Stop Smoking Medication

21mg Nicotine Patch – 24 hour

This patch is designed to give a high dose of nicotine steadily throughout the day and night for 24 hours.

1. Put the patch on as soon as you wake up – you will need scissors to open the packet.
2. Peel off the backing paper and put the patch on a clean, dry area of skin which has no hair.
3. Hold your hand over the patch for a few seconds to warm it up, this will help it to stick to your skin well.
4. Once you have put it on, the patch will take about half an hour to reach its full effect.
5. Leave it on all day and all night. It may tingle or itch at first, but this should stop after 15 – 20 minutes.
6. Take the patch off in the morning and throw it away, then put a new patch on.
7. Put the new patch on in a different place. This gives the skin a chance to recover as there may be some redness. Try to have 4 different places that you use for the patch.
8. Keep using the patches for 6-8 weeks, or as instructed by your stop smoking advisor.

This guidance is applicable for all brands of this product.
