

Emergency Decision Unit Pathway

Awaiting Results Pathway

Date

Patient Details

Full Name

DoB

Unit
Number

This pathway is designed for patients who are medically fit for discharge if results that are awaited are normal and the treating clinician feels there is a reasonable high likelihood that the test will be normal. Patients **should not** be sent to EDU for tests to be completed eg sending them there for a troponin in 2 hours time is not acceptable.

Inclusion Criteria	• Patient medically fit for discharge if test result negative or normal • Test or scan already completed.
Exclusion criteria	• Patient will need further tests or re-evaluation , even if result awaited negative or normal • Patient is unfit for discharge or in need of hospital admission regardless of the test result • Test result likely to take more than four hours to process, eg not acceptable to put a patient on EDU overnight to await a test to be done by labs in the morning, such as drug levels.

Test result awaited:-

Time result to be checked:-

Action if test result positive or abnormal:-

Action if test result normal or negative:- (eg discharge home with advice)
